F13 / PRESENTATION AND DEMO

Live demonstration plan

Ten-minute presentation and demonstration outline. Use a fresh assessment/test database and configured local settings. The five suggested speaking responsibilities below are a delivery plan; they do not assign past contributions or substitute for confirmed member names.

Time	Activity	Suggested presenter
0:00-1:00	Problem, objectives and SYNCLAB scope	Member 1
1:00-2:00	UI and database/OOP design overview	Members 2 and 3
2:00-4:00	New allocation; show required fields and successful key	Member 2
4:00-5:00	Edit by saved key; show Pending reset	Member 4
5:00-7:00	Admin access, date filter, remarks and status	Member 3
7:00-8:00	Reject/reuse a slot; demonstrate handled conflict	Member 4
8:00-9:00	Query result summary and test evidence	Member 5
9:00-10:00	Limitations, future work and conclusion	All members

Preparation checklist

• Launch B6 / Windows_x64 / Run_SYNCLAB_Group_01.cmd on the assessment computer, or build B5 source. Confirm the selected database.

• Use fictional student inputs and a current/future date. Keep enough free slots for creation and later editing.

• Record the generated allocation key for the edit step. Configure workshop access and verify the passcode.

• Open the presentation and the query-output PDF. Test the email handler beforehand if showing drafts.

• Agree each member name, speaking role and confirmed contribution declaration.

LIVE DEMO / 2

Demonstration script and acceptance checks

Step	Action and evidence to show
1 Initial access	Welcome: explain student access and administrator passcodes.
2 Create	Select Computer, a free future date/slot and fictional details. Confirm; show Pending and the key.
3 Validate	Try an invalid email in a separate request. Show prompt and absence of a saved row.
4 Edit	Use the saved key, change project/date/slot and update. Verify key unchanged and Pending.
5 Review	Authenticate to Computer dashboard. Filter the date, Show All, add remarks and set Approved.
6 Conflict / release	Reject a record to release a slot. Book that slot in another record; try reapproving the original. Show handled conflict.
7 Delete	Confirm deletion of a test booking and show its released availability.
8 Report / summary	Open status-workload or workshop-utilization exported table. Explain stored status versus UI label.

Recovery if a step fails

Keep a known fictional-data backup and restart with the application closed if needed. Avoid changing real data. If the email handler is unavailable, explain the draft boundary and continue with the SQL summary. Display the actual error and recorded test evidence instead of claiming an unobserved pass.

Final group check

The supplied project documents identify Group 01 but do not provide a verified member roster or individual contribution allocation. The group must add and confirm its member names, index numbers and actual contributions before final submission. No individual attribution has been invented.

A live demonstration cannot be supplied as a PDF. This artifact supplies the prepared script, sequence and participation plan for the group to execute.
