A2 / DESIGN AND MODELLING

UI/UX design

Five pages guide a student from workshop selection to a confirmed allocation. An administrator enters the dashboard from the calendar for the selected workshop.

Navigation rules

Welcome is the initial access point. The selection and calendar pages require a workshop and at least one available slot before continuation. Key-based editing loads an existing record. Administrator editing returns to the dashboard after saving.

Implementation basis: StudentWorkshopApp.pro and its compiled sources. Prepared 07 October 2026. All demonstration identities and bookings are fictional.

DESIGN STRUCTURE

Key screen wireframes

Welcome

SYNCLAB title
New allocation / Edit allocation
System settings

Workshop selection

Workshop cards and category names
Selection highlight
Back / Next

Calendar

Workshop heading
Calendar / four time slots
Status counts and slot availability

Allocation form

Student name and index
Department and email
Supervisor / project / description

Admin dashboard

Workshop title and date filter
Records table + status / remarks
Edit / Delete / email draft

These simplified wireframes describe the layout of the implemented Designer forms. They are design illustrations, not test screenshots.

Input and feedback

Primary actions use blue. Disabled controls show missing selections or unavailable slots. Form validation identifies the first invalid field and focuses its input. Confirmation dialogs protect deletion and discarding entered details.

Designer basis: welcome.ui, selection.ui, calander.ui, form.ui and admin.ui. The spelling calander is retained in the source filename.

IMPLEMENTED UI

Initial access and workshop choice

Figure 1. Welcome: project title, new allocation, edit by key and system settings.

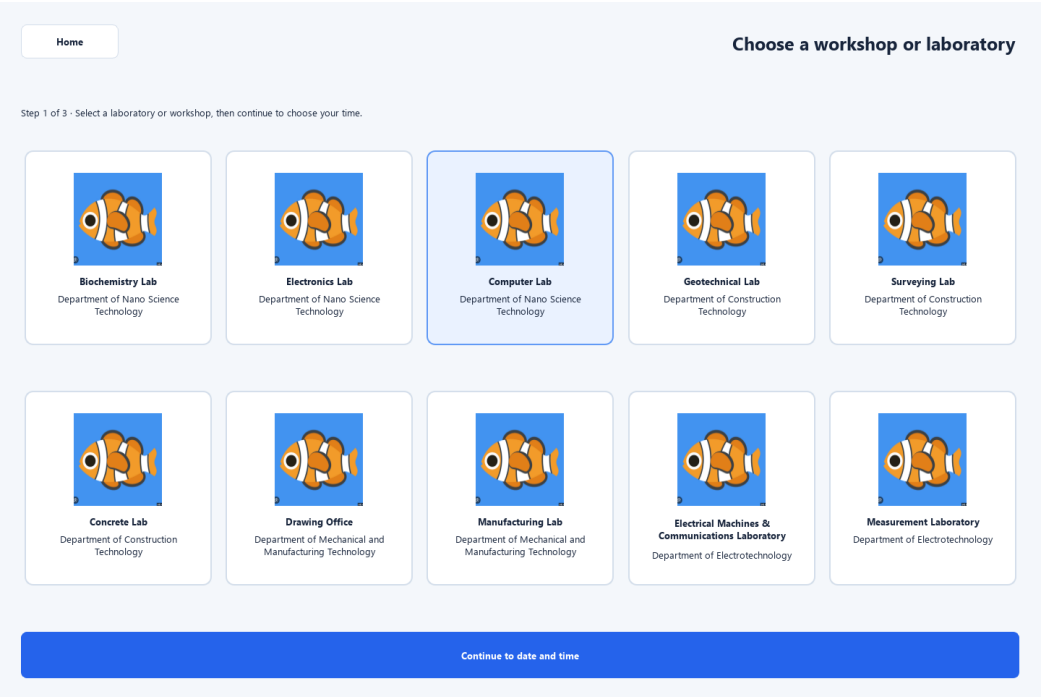

Figure 2. Workshop selection: ten laboratory/workshop cards and the continuation control.

IMPLEMENTED UI

Schedule and student details

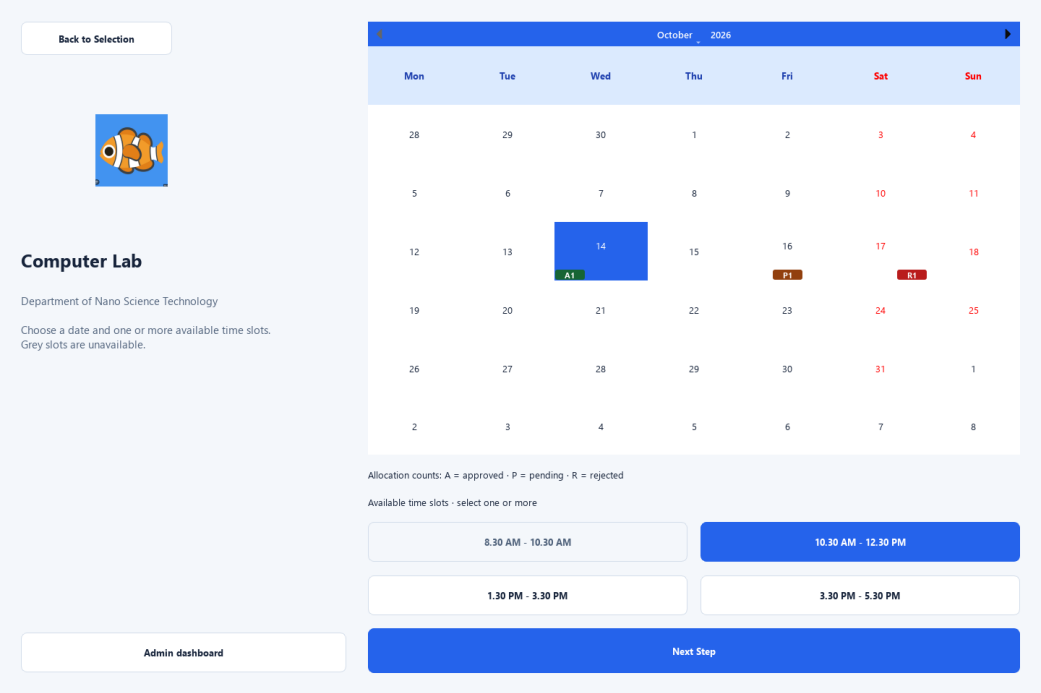

Figure 3. Calendar: category, selected date, four daily slots and status counts.

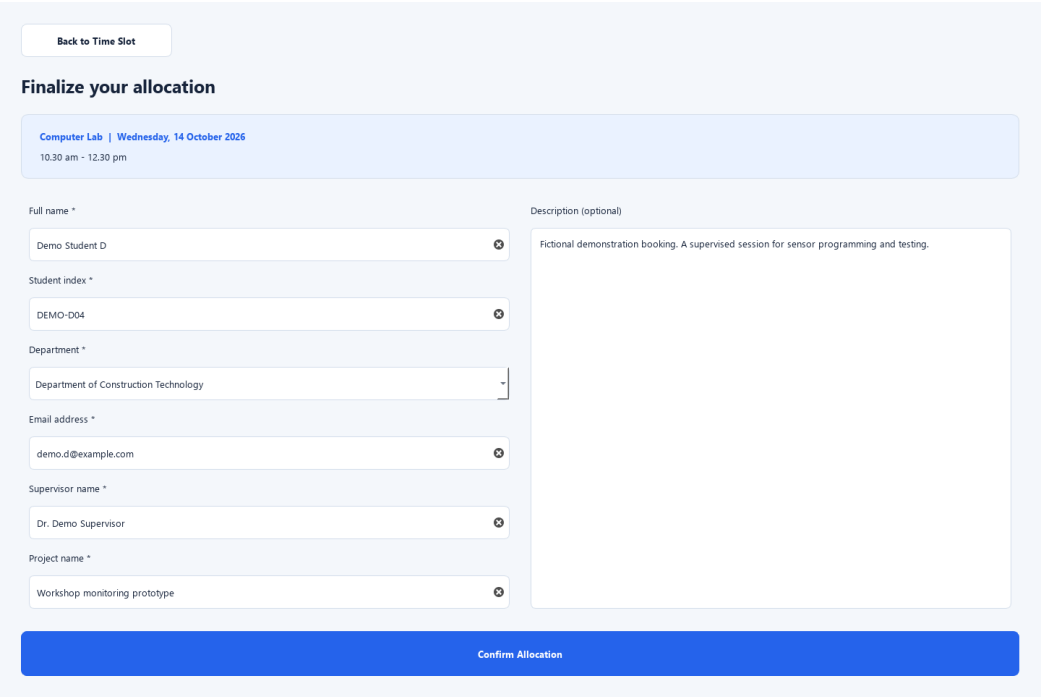

Figure 4. Allocation form: identity, supervisor and project inputs with the schedule summary.

IMPLEMENTED UI

Administrator workspace

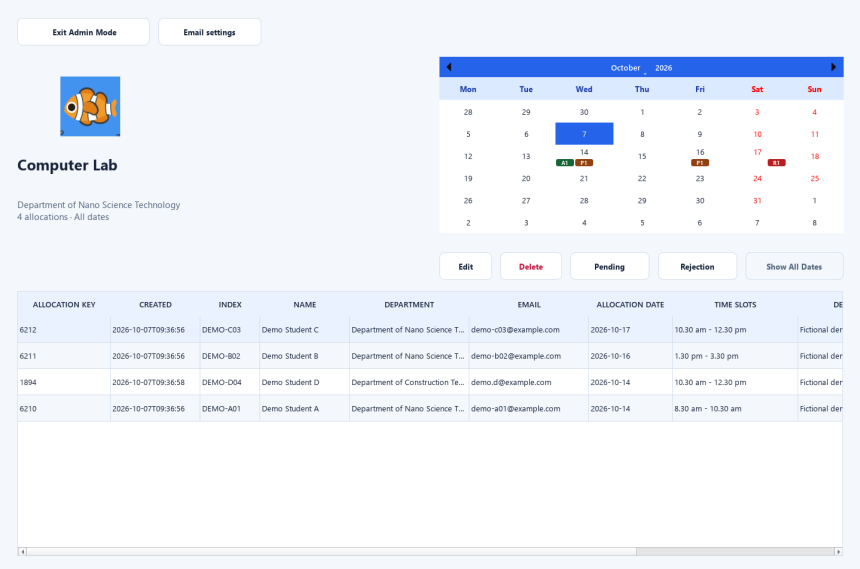

Figure 5. Actual compiled dashboard with fictional records. Calendar/date filtering, identity columns and row actions are visible.

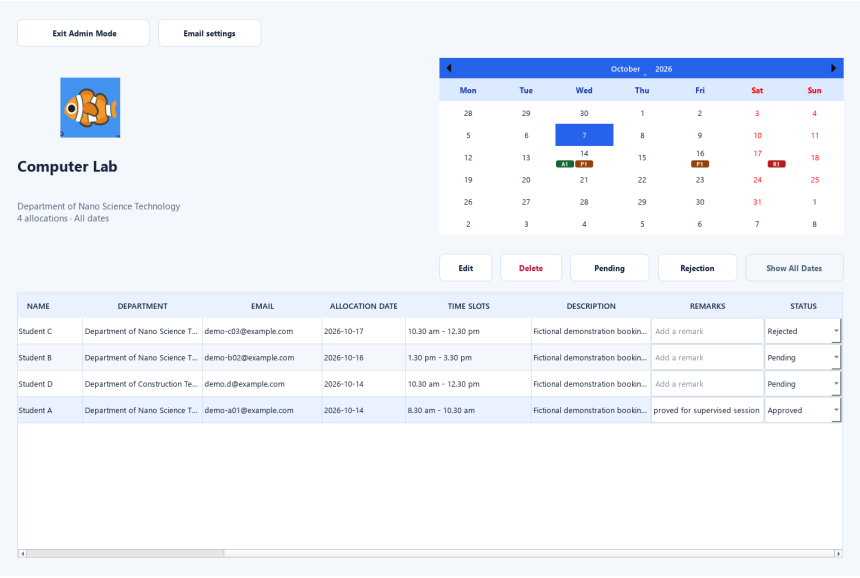

Figure 6. The same table scrolled right exposes remarks and status controls.

Design choice	Reason
Five-page workflow	Keeps category, schedule and identity choices in a clear order.
Per-workshop administrator scope	Loads and manages records for the selected laboratory.
Date counts and slot availability	Shows booking status and prevents selecting occupied slots.

Capture method: compiled Qt widgets with isolated test storage. These images do not establish every user interaction or display size.
