SUBMISSION CONTROL / 1 OF 3

Requirements review and corrections

Reviewed against the newly supplied 19-item checklist and NANO2142 project information sheet, alongside the original submission guide. Technical artifacts now cover 17 checklist items; items 16 and 19 require verified group attribution. The top checklist remains unsigned.

Item	Requirement	Reviewed evidence
01	Identity labels	All delivery wrappers; manifest; code/dependency names retained
02-04	Use cases, flow and UI	A1: 5 cases/actors. A2: flow, wireframes and final screens
05-07	Database design / SQL	A3: ER, exact v4 schema, PK/FK, normalization and scripts
08-10	OOP diagrams / note	A4: class diagram; 2 sequences; 2-page OOP explanation
11-12	Source / runnable delivery	B5: 73 original files + README. B6: exe, DLLs, plugins, guide
13-14	Screens / SQL outputs	C7: data entry, validation, filtering, CRUD and report PNG; C8: 5 queries
15	Tests and actual results	D9: 10 groups / 69 assertions, 19 additional UI assertions; logs
16	Final report	E10: 12 pages; contribution declaration pending real names/work
17-18	Manual / final slides	E11: 3 pages/screenshots. F12: 12-slide PDF + editable PPTX
19	Live plan / presenters	F13: 10-minute feature script; named presenter mapping pending

Concrete repairs

Added a runnable Windows bundle and its reproduction manifest, an interactive first-page checklist, a three-page proposal and five-minute initial deck. Branded delivery wrappers, refreshed launch/manual/report guidance and added an explicit executed SQL report visual. The original source snapshot is preserved.

Coverage is evidence availability, not an assessment grade. Technical filenames are preserved where changing them would break source builds or runtime loading.

COMPLIANCE REVIEW / 2 OF 3

Information-sheet requirements

Requirement	Evidence / remaining action
Functional GUI, SQL and C++ OOP	Qt Widgets, schema v4, virtual persistence interface, domain/rules classes and executed integration tests. Academic workshop/lab context.
Five students per group	Five proposed role slots exist. Actual names, index numbers and contributions have not been supplied.
Initial proposal: 2-3 pages	G1 contains a 3-page proposal-format supporting document prepared now. Confirm any earlier submission.
Initial oral presentation: 5 minutes	G2 provides 6 slides and a 5-minute plan. Prior actual delivery is unverified.
Executable with source	B6 contains actual production Windows executable with Qt/MinGW dependencies. B5 retains full source and README.
Final report: 10-12 pages	E10 is 12 pages with required sections; verified contribution attribution remains open.
Final presentation: 10 minutes + live	F12 deck and F13 timed demo. All five real members must participate.
Timing	Deliverables heading: Week 14-15. Student note: due Week 14. Prepare for Week 14 and confirm the exact date.

Verification boundary

Production startup was checked using the actual delivered executable and its own runtime modules, with an empty isolated database. Existing functional evidence includes 69 integration assertions, 19 additional UI assertions and 20 SQL checks. Normal target display, local email handler, real contributions and oral participation still need group verification.

COMPLIANCE REVIEW / 3 OF 3

Assessment evidence and completion

Criterion	Max. marks	Evidence
UI/UX design	4	A2, C7: navigation, wireframes, actual screens and validation
Database design / functionality	4	A3, C8, D9: schema, normalization, queries, integrity and CRUD
C++ OOP implementation	6	A4, B5: encapsulation, inheritance and virtual overrides
Full-system integration	3	B6 and D9: production launch, compiled application checks
Documentation / presentation	3	12-page report, 3-page manual, final slides, live script; G initial materials

Complete before final hand-in

• Confirm the five member names and index numbers, actual individual work, leader and named final speaking roles. Add the contribution table to the report and map presenters in the live plan.

• Have the actual leader enter their name and sign the first-page checklist. Tick 16/19 only after their group-specific content is complete.

• Confirm the mandatory earlier proposal/initial presentation with the instructor. Newly prepared files are not proof that an earlier event occurred.

• Rehearse the ten-minute presentation/live demo with all members; confirm normal display, selected data file and email-handler opening on the assessment computer.

• Use the Week 14 planning boundary until the course confirms its exact deadline.
